True density p_0 vs.\ prior family $\{p_a : a \in [-c, c]\}$
p_0 (true, $K_0 = 3$)
π^* = Uniform (I-projection)
p_a, $a = -0.3$
p_a, $a = 0.3$
p_a, $a = 0.5$
density
x
KL divergence: I-projection minimizes at $a^* = 0$
$a^* = 0$ (I-projection)
Sanov floor = 0.0461
Csisz\'ar: KL($p_0 \| \pi^*$) + $a^2/2$
KL($p_0 \| p_a$)
