
(a) evidence under H_1
$t\,D(P_1\|P_0)$
$\log 20$
$\log E_t$
observation t
(b) when the test stops, $b = 20$
simulated τ_{20}
Gaussian, MDP scale
inverse Gaussian
stopping time
(c) optional stopping under H_0
false rejection rate
4.5%
3.7%
21.8%
likelihood ratio
prequential mixture
maximum likelihood
